Basic Life Support (BLS) Provider Handbook Feb 28 2023 The Save a Life Initiative has just released its newest course: Basic Life Support. This manual is based on the 2015-2020 Basic Life Support guidelines published by the American Heart Association. The Basic Life Support (BLS) Provider Handbook is a comprehensive resource intended for health care professionals currently enrolled in a Basic Life Support Certification or Recertification Course. It serves as the primary training material for BLS Certification and Recertification courses. Although it is primarily intended for professionals to use during their courses, the handbook was also created to serve as daily resource material for health care professionals. Information covered in the handbook includes Basic Life Support instruction for adults and children, AED usage, airway obstruction and rescue breathing techniques, and more. Specific Algorithms for BLS and more are also included within the handbook. All material included in this handbook is delivered in a manner meant to enhance learning in the most comprehensive and convenient way possible.

Impact of a Practice Session Using Objective Feedback on Basic Life Support Skills 12 Weeks Following Initial BLS Training Jan 06 2021 Abstract: Sudden cardiac arrest is the leading cause of death in the United States. Research has shown that providing immediate high quality CPR may improve patient's survival. Although we know high quality CPR may improve outcomes from sudden cardiac arrest, data still shows CPR patients are receiving is inadequate. Data suggest health care professional's CPR skills deteriorate quickly upon completion of basic life support training. Skills decline as soon as 2-3 weeks following initial training. This study aimed to determine if using objective feedback during initial adult basic life support training in combination with a practice session using objective feedback would improve student CPR skills. Students were randomized to either use a traditional CPR manikin during initial adult CPR training or an objective feedback manikin. Students randomized to use the objective feedback manikin were asked to participate in a CPR practice session 6 weeks after completing their initial CPR course. During the practice session students were asked to use objective feedback to correct their skills. While student's practiced their skills, they were timed to see how long it would take them to perform CPR in accordance to the 2005 AHA guidelines for CPR and ECC for 2 minutes. To satisfy this requirement, students must perform CPR within the recommended guidelines for ventilation rate, chest compression rate and depth, as well as no flow fraction. All participants were asked to return at 12 weeks for final testing. The ResusciAnne skillreporter manikin was used to collect objective CPR compliance data. Seventeen students participated in the study, 9 treatment and 8 control participants. Due to lack of instructor compliance, determining whether using objective feedback for initial training had an impact on student skills is not answerable. There were no significant differences found in student's CPR skills between those who did and did not participate in the objective feedback CPR practice session.

Basic Life Support Provider Manual - A Comprehensive Guide Covering the Latest Guidelines Nov 15 2021 Basic Life Support (BLS) Provider Manual - The content in this handbook is in compliance with the 2020 guidelines for CPR and ECC (Emergency Cardiac Care), recently released by the American Heart Association - therefore, all the protocols illustrated in this book are based on up-to-date evidence. These guidelines are updated every 5 years. The BLS Provider Manual is a complete guide and reference tool that covers all the information students need to know in order to successfully complete the BLS course. For easier learning, multiple-choice questions can be found at the end of each chapter. The answers to these exercises are found at the very end of the book. Basic Life Support (BLS) refers to a set of procedures that can be learned to prolong survival in life-threatening situations until more professional help is available. Any individual can become certified in basic life support protocols. These protocols are frequently updated, based on the latest evidence available, and every individual who undergoes BLS certification may need to refresh their knowledge every two years. Medical professionals usually have a sound understanding of basic life support protocols. Even then, it is essential for them to frequently undergo certifications to update their knowledge regarding the latest evidence-based protocols. This handbook is designed for both medical professionals and non-healthcare individuals. It aims to establish a sound understanding of the mechanisms underlying basic life support. The intended audience is healthcare students and personnel who need to learn how to perform CPR and other basic cardiovascular life support skills in a wide variety of both clinical and prehospital settings. Nursing Management of Pediatric Disaster Feb 25 2020 This textbook describes what nurses need to know about pediatric disaster nursing, including public policy, and addresses preparedness for all types of disasters (natural and man-made) and strategies for hospital, school and community preparedness. The book opens with a brief history of disaster nursing and explains the key differences between pediatric and adult disaster nursing. Recent years have been marked by numerous man-made and natural disasters, which have led nurses to seek new resources to be better prepared, in their role as nurses, for all types of disasters. Responding to this lack of resources, the book focuses on the unique needs of babies and children. It is the first and only textbook on pediatric disaster preparedness to include both the physical and psychological effects of disaster. Key aspects covered include: the psychosocial differences in and how to approach children; family reunification; medications, supplies and equipment; and decontamination. Given its breadth of coverage, the book is well suited as a textbook for nursing classes, while also offering a valuable resource for nurses working in the field.

Minimally Invasive Aesthetic Procedures Sep 01 2020 Minimally invasive aesthetic procedures are an important part of dermatologists' day-to-day clinical routine. However, plastic surgeons are also becoming more willing to explore them, and minimally invasive cosmetic and aesthetic procedures are now an established interdisciplinary topic. Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons addresses the needs of both these specialties. It provides a comprehensive overview of the most relevant and widely used minimally invasive procedures, presented in a practical and straightforward style. Rather than a broad overview of the literature, it offers a step-by-step guide to clinical procedures. Each chapter explores a single clinical procedure, discussing the theoretical basis; the materials needed; the methods and techniques; clinical follow-up; before-and-after illustrations; as well as the side effects and complications and their management. It also includes a summary of tips and relevant references. With more than a hundred procedures presented and discussed in a clinically applicable format, Minimally Invasive Aesthetic Procedures - A Guide for Dermatologists and Plastic Surgeons is a practical manual for all dermatology and plastic surgery practitioners who are interested in aesthetic medicine.

BLS In Medical Curriculum Dec 25 2019 Basic Life Support (BLS) is the cornerstone of resuscitation and the main determinant of survival from an out-of-hospital cardiac arrest.[1]The European Resuscitation Council (ERC) Guidelines for Resuscitation 2015 highlighted the importance of teaching CPR to Healthcare professionals working in a variety of settings.[1] As initial training sites for all physicians, medical schools are prime locations for CPR training. This recommendation is in line with the final report on the Tuning Project for Medicine (2008), an initiative funded by the European Commission. Providing immediate care in medical emergencies is considered a Level 1 competence and all medical graduates must be able to provide BLS according to the ERC guidelines.[2] In 2011, NOVA Medical School of New University of Lisbon conducted a curriculum reform and established a partnership with an ERC accredited school (Associau00e7u00e3o ALENTO). A BLS provider course was included in the 1st year of the medical curriculum. A refresher course was also included in the 3rd year, allowing the revision of previouslyacquired skills and providing additional training in automatic external defibrillation (AED).Since 2011, 2698 medical students were trained in BLS/AED. 26 students were identified as potential instructors, of whom 10 became full instructors accredited by the ERC.As a result of this project, since 2017, all medical graduates from NOVA Medical School have been trained and certified by the ERC as BLS/AED providers.

CPR/AED for the Professional Rescuer Mar 20 2022 This New American Red Cros CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR. The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.
