On a hot, humid day, Tristan Blake is sweating it out trying to hitch a ride past Kerikeri, up north. It is summer in New Zealand, 2030 - the temperature is rising, and Tristan is looking to get away from it all, after retiring from Peace-making army duty in the Middle East. An old red Holden Ute pulls up on the side of the road, with fishing lines strapped in the back, Maori priest, Rau Petera invites him on a ride to Ninety Mile Beach. Keen to fish, Tristan agrees, but once there they stumble across Joshua Davidson from Kaitai - who catches a record snapper with no bait. Somehow, Rau and Tristan find themselves driving Joshua on a once-in-a-lifetime road-trip down the centre of the North Island, toward the Beehive in Wellington. Joshua is reminding Rau of someone - he is finding a new kind of faith. But Tristan is being thrown into increasing confusion and dismay - as he comes to realise what he must do to end the growing threat of Joshua. Starting in the 60's and looking at everything that happened in between, this is a of view my life, and how a diagnosis of breast cancer changed it in 2011. It's funny, frank, sad yet uplifting, and examines in detail, the ripple effect cancer can have on those we love. May it help others to find their New Kind of Normal and never give up hope. Two and a half years have passed since Kensington confronted his son Alex in Saint Peter's Cathedral, Wellington, New Zealand. Alex has been studying at Victoria University, while the Prime Minister James Connor continues to lead the nation from the Beehive. Rachel Connor has been training to become a Physician, while her husband, John Robertson, remains in the Cathedral with Bishop Mark Blake. Tristan Blake has been watching Alex. Tristan sees the legacy of Alex's past: a past Alex seems to be trying to hide. What might become of him? Rau Petera remains on the shores of Oriental Bay, offering good news: but Tristan is watching. The nation has suffered an upheaval, and has settled in a kind of peace - but Tristan is uneasy. Trouble is brewing overseas; trouble within. Kensington is taking a greater hold. Powers are rising: the world is at risk of war. What fate will beset the nation? What forces, in the midst of the growing darkness, will win? Griffin is a budding name in mainstream African American fiction. --Chicago magazine After her father's death, Emily Yancy agrees to move back to her dead-end hometown. But she's dreading every minute she'll have to spend in her mother's tiny apartment. After all, she's a forty-three-year-old divorcée who's doing just fine on her own. There are some rewards for dutiful daughters though--like Aaron Merritt, a rich, single doctor with chocolate skin and bedroom eyes. . . Aaron is soon taking Emily to fancy restaurants and inviting her to meet his family. But when the lights go out, something's missing. Enter Teddy Simms, Emily's eighth-grade crush. Teddy hasn't achieved what Aaron has--but he's picked up a few skills in other areas. Will Emily choose a relationship that doesn't satisfy her mind--or an easy compatibility that doesn't quite extend into the bedroom? Or is there some way she can find the best of both worlds? "A compelling drama about three families striving for the American dream." --Booklist on *If These Walls Could Talk* "Fear and joy practically leap off the pages. A well-written story you will hate to see end." --RT Book Reviews on *Once Upon a Project* "Griffin expertly explores the universal search for love." --Booklist Explains the distinctive political orientation of America's young adults, outlining six key attributes, from lack of party affiliation to computer skills, that promise to transform the political landscape. *The Book That Launched a Movement* The first installment of Brian D. McLaren's trilogy recounts a lively and intimate conversation between fictional characters Pastor Dan Poole and his daughter's high-school science teacher, Neil Oliver. They reflect together about faith, doubt, reason, mission, leadership, and spiritual practice in the emerging postmodern world. *A New Kind of Christian* offers a tale of hope and spiritual renewal for those who thought they had to give up on faith, God, and church. A fascinating collection of portraits of people who have re-created themselves through plastic surgery. Toledano believes that these people are the vanguard for a period of human-induced evolution, representing a turning point in history where beauty and physicality can be controlled and defined. Through his arresting portraits, he explores how controlling beauty can influence its power as a currency, whether beauty is informed by culture, history or the surgeon's hand and the reasons why people are compelled to re-make themselves. By the CWA Gold Dagger award-winning author of *Other Paths to Glory* *A New Kind of War* takes us back to the Greece and Germany of 1945 - as the old kind of war comes to its official end. Why has David Audley broken the British-Greek truce? And furthermore, why did his brigadier order his actions? Is it just coincidence that Audley is surprised near Delphi by Captain Fattorini of the Royal Engineers? As a result of that unfortunate encounter, Fattorini finds himself in occupied Germany as the newest member of TRR-2: a special Intelligence unit engaged in a dangerous and brutal game. It is not until he at last meets Audley's mysterious brigadier that Fattorini learns the full truth about his own assignment in the ill-omened Teutoburg Forest. *A New Kind of Apologist*, edited by Sean McDowell and with contributions from more than 20 leading apologists, is the go-to resource for effectively defending the Christian faith in our changing culture. In it you'll discover: important topics often ignored by apologists, such as transgender issues, religious freedom, and the intersection of economics and apologetics a new kind of apologetics that is relational, gracious, and holistic interviews with both seasoned apologists and skeptics, providing insights into how to do apologetics effectively in today's culture *A New Kind of Apologist* addresses the latest issues, including "Connecting Apologetics to the Heart" "Teaching Apologetics to the Next Generation" "Apologetics in our Sexually Broken Culture" "Apologetics and Islam" "Apologetics and Religious Freedom" and adopts fresh strategies for reaching those who are outside the church with the truth of the gospel. Muhammad Yunus, the practical visionary who pioneered microcredit and, with his Grameen Bank, won the 2006 Nobel Peace Prize, has developed a visionary new dimension for capitalism which he calls "social business." By harnessing the energy of profit-making to the objective of fulfilling human needs, social business creates self-supporting, viable commercial enterprises that generate economic growth even as they produce goods and services that make the world a better place. In this book, Yunus shows how social business has gone from being a theory to an inspiring practice, adopted by leading corporations, entrepreneurs, and social activists across Asia, South America, Europe and the US. He demonstrates how social business transforms lives; offers practical guidance for those who want to create social businesses of their own; explains how public and corporate policies must adapt to make room for the social business model; and shows why social business holds the potential to redeem the failed promise of free-market enterprise. The horrific and astonishing true story of the double life of Russell Williams, who was at once a respected figure in the Canadian military and a ruthless sado-sexual serial criminal and murderer. A model officer and elite pilot, Colonel Russell Williams was trusted with flying international dignitaries including Queen Elizabeth, as well as commanding Canada's most important military airbase. Yet his dark and violent secret life included breaking into 82 homes of girls and women; thefts of vast amounts of lingerie (which he dressed in); two bizarre sexual assaults that left an uncomprehending Ontario village on a knife's-edge; and eventually, two rape-murders. In *A New Kind of Monster*, veteran Globe and Mail crime reporter Tim Appleby chronicles a true story that could have been lifted from the darkest pages of pulp fiction, one that offers fascinating--and troubling--insights on human

psychopathology. Carol Kent has lived every parent's nightmare. After her only son was sentenced to life in prison without the possibility of parole, Carol's life took a permanent detour. She and her husband, Gene, have been adjusting ever since, moving to Florida to be near the prison, starting a new ministry for prison inmates and their families, and sharing the faithfulness of God with anyone who will listen. A New Kind of Normal begins with the story of that horrible night when Carol and Gene learned their son had been arrested, but it doesn't end there. In fact, Carol knows what it means to live with an unthinkable circumstance that will never change—and to still make hope-filled choices. Through the eight chapters in this book, Carol will use their own story, the story of Mary mother of Jesus, and stories of women who have experienced their own "new normal" to share how God has led them to choose life, gratitude, vulnerability, involvement, forgiveness, trust, and action. Prof. McClain has, quite simply, produced a new kind of tutorial book. It is written using the logic engine Mathematica, which permits concrete exploration and development of every concept involved in Symmetry Theory. It is aimed at students of chemistry and molecular physics who need to know mathematical group theory and its applications, either for their own research or for understanding the language and concepts of their field. The book begins with the most elementary symmetry concepts, then presents mathematical group theory, and finally the projection operators that flow from the Great Orthogonality are automated and applied to chemical and spectroscopic problems.

Society is complicated. But this book argues that this does not place it beyond the reach of a science that can help to explain and perhaps even to predict social behaviour. As a system made up of many interacting agents – people, groups, institutions and governments, as well as physical and technological structures such as roads and computer networks – society can be regarded as a complex system. In recent years, scientists have made great progress in understanding how such complex systems operate, ranging from animal populations to earthquakes and weather. These systems show behaviours that cannot be predicted or intuited by focusing on the individual components, but which emerge spontaneously as a consequence of their interactions: they are said to be 'self-organized'. Attempts to direct or manage such emergent properties generally reveal that 'top-down' approaches, which try to dictate a particular outcome, are ineffectual, and that what is needed instead is a 'bottom-up' approach that aims to guide self-organization towards desirable states. This book shows how some of these ideas from the science of complexity can be applied to the study and management of social phenomena, including traffic flow, economic markets, opinion formation and the growth and structure of cities. Building on these successes, the book argues that the complex-systems view of the social sciences has now matured sufficiently for it to be possible, desirable and perhaps essential to attempt a grander objective: to integrate these efforts into a unified scheme for studying, understanding and ultimately predicting what happens in the world we have made. Such a scheme would require the mobilization and collaboration of many different research communities, and would allow society and its interactions with the physical environment to be explored through realistic models and large-scale data collection and analysis. It should enable us to find new and effective solutions to major global problems such as conflict, disease, financial instability, environmental despoliation and poverty, while avoiding unintended policy consequences. It could give us the foresight to anticipate and ameliorate crises, and to begin tackling some of the most intractable problems of the twenty-first century.

In A New Kind of Diversity, bestselling author Tim Elmore brings his decades of research and leadership experience to bear on what might be the biggest, most dramatic, and most disruptive shift the American workforce has ever seen: the vast diversity of several generations living—and working—together. The past few years have brought an endless cascade of social media movements that left many of us . . . well . . . scratching our heads. #Occupy Wallstreet. #March For Our Lives. #Black Lives Matter. #MeToo. #ClimateChange. Regardless of how you might feel about these protests, each symbolizes a gap. Despite the perspectives on all sides of these causes, a clear issue remains: There is a huge gap in this country that few are taking seriously. While diversity is usually seen as an ethnic, gender, or income issue—there is a new kind of diversity that only eight percent of U.S. companies even recognize: diverse generations on teams. Long laughed off as a cliché and more recently mocked in memes #HowToConfuseMillennials and #OKBoomer hashtags, the generational gap has become an undeniable tension in the global workplace. Sadly, it has fostered: Loneliness in our workplaces. Poor communication on our teams. Reduction in revenue and team morale. Conflicting values and priorities in the office. Divisions that lead to "walls" instead of "bridges." For the first time in history, up to five generations find themselves working alongside each other in a typical company. The result? There can be division. Interactions between people from different generations can resemble a cross-cultural relationship. Both usually possess different values and customs. At times, each generation is literally speaking a different language! How can we hope to work together when we can't even understand each other? This book provides the tools to: Get the most out of the strengths of each age group on your team. Foster effective communication instead of isolation among people. Build bridges rather than walls so that loneliness becomes connectedness. Connect people to learn how both veterans and rookies can mentor each other. This work presents a series of dramatic discoveries never before made public. Starting from a collection of simple computer experiments—illustrated in the book by striking computer graphics—Wolfram shows how their unexpected results force a whole new way of looking at the operation of our universe. Wolfram uses his approach to tackle a remarkable array of fundamental problems in science: from the origin of the Second Law of thermodynamics, to the development of complexity in biology, the computational limitations of mathematics, the possibility of a truly fundamental theory of physics, and the interplay between free will and determinism. Groundbreaking author Brian McLaren, voice of the Christian emergent movement and author of the 'New Kind of Christian' series, poses ten controversial questions that could lead to a radical redefinition of the Christian faith. What is the overarching storyline of the Bible? What is the Gospel? Why is sexuality such a divisive issue among Christians? How should followers of Jesus relate to people of other religions? McLaren gives his own responses to these questions, inviting the reader to a new and generous way of thinking about Christianity. The latest clarion call in the never-ending cavalcade of "what's new" in the evangelical world is the confident assertion from some quarters that the church needs to embrace "postmodernism" if it is going to engage postmoderns effectively. Pastors trying to break down the often indigestible subject matter of postmodernism into bite-size chunks in order to equip their people to engage it, and teachers who are aiming at giving their students a working knowledge of the way postmodernism is impacting the church will find a good deal of help from Smith. -J. Ligon Duncan III, Senior Minister, First Presbyterian Church, Jackson, Mississippi Scott Smith and I agree on a lot. We share a deep commitment to Jesus Christ, a love of the Bible, and a passion for the church. We also agree that we're currently living in a liminal time, and it's those "boundary times" when people look most closely at the beliefs that underlie their practices. So, we've all got some things to figure out right now, including what we can really know and the certainty with which we can state our claims in a pluralistic society. I appreciate Scott's voice in this conversation. He is a careful reader of my work, and he writes with a gracious and generous tone. Interlocutors like Scott will be a helpful challenge to all of us in the "emerging church." I consider him a friendly critic and a brother in Christ. -Tony Jones, author of Postmodern Youth Ministry and National Director, Emergent Scott Smith is uniquely suited to enter the Emergent conversation with this helpful volume. Not only is he an analytic philosopher with a razor-sharp mind who has specialized in analyzing postmodernistic views on the relationship between language and the world, but he is also a man who cares for the lost, loves the church, and has an ability to communicate complex truths to people in the pew. -Justin Taylor, Executive Editor, Desiring God Every leader in the new Emergent Movement will want to read this fascinating book. They simply will not find a more engaging, knowledgeable, balanced, and kind treatment of their concerns, ideas, and practices. -Craig J. Hazen, Professor of Comparative Religion, Biola University Scott Smith's study challenges us to take seriously the truth claim of the gospel both in how we proclaim it in words and in how we manifest it in our personal and community lives. -Gary Inrig, Senior Pastor, Trinity Church, Redlands, California It is not far-fetched to say that much of what is termed "African metaphysics" remains a traditional affair, without the sort of critical analysis that sheds away the burden of myths and ethnocentric rigidity. African ideas about the nature of being, God, causality, death, etc., have largely remained the same and unchallenged, mainly due to the hesitancy of some African scholars to question these suppositions or build beyond them. In this book, Aribiah David Attoe presents a unified African metaphysics that first interrogates important notions held by many traditional African thinkers, and then builds upon them to propose a largely materialistic account of African metaphysics. The book re-imagines and reconstructs the idea of God, being, causality and death in African metaphysics, tackling some of the problems associated with these concepts in African thought. It also opens up new vistas of thought, while engaging and encouraging African metaphysicians to explore a previously ignored perspective. "Reinventing Discovery argues that we are in the early days of the most dramatic change in how science is done in more than 300 years. This change is being driven by new online tools, which are transforming and radically accelerating

scientific discovery"-- It is clear that computation is playing an increasingly prominent role in the development of mathematics, as well as in the natural and social sciences. The work of Stephen Wolfram over the last several decades has been a salient part in this phenomenon helping founding the field of Complex Systems, with many of his constructs and ideas incorporated in his book *A New Kind of Science* (ANKS) becoming part of the scientific discourse and general academic knowledge--from the now established Elementary Cellular Automata to the unconventional concept of mining the Computational Universe, from today's widespread Wolfram's Behavioural Classification to his principles of Irreducibility and Computational Equivalence. This volume, with a Foreword by Gregory Chaitin and an Afterword by Cris Calude, covers these and other topics related to or motivated by Wolfram's seminal ideas, reporting on research undertaken in the decade following the publication of Wolfram's NKS book. Featuring 39 authors, its 23 contributions are organized into seven parts: Mechanisms in Programs & Nature Systems Based on Numbers & Simple Programs Social and Biological Systems & Technology Fundamental Physics The Behavior of Systems & the Notion of Computation Irreducibility & Computational Equivalence Reflections and Philosophical Implications.

Prime Minister of New Zealand Jacinda Ardern is a leader for a new generation, one tired of inertia in the face of pressing issues such as climate change, immigration and the rise of far-right terrorism. Ardern was catapulted onto the international stage with her grace and compassion following the Christchurch mosque shooting. Oprah Winfrey invited us to 'channel our inner Jacindas' as praise for Ardern flooded headlines and social media. The world's youngest female head of government, and only the second elected world leader to give birth while in office, Ardern describes herself as a progressive and a social democrat. In this revealing biography, journalist Madeleine Chapman discovers the woman behind the headlines. Politically engaged from an early age, Ardern has encountered her fair share of sexism, but rather than let that harden her she advocates 'rising above' critics. In her first press conference, she announced an election campaign of 'relentless positivity'. The tactic was a resounding success: donations poured in and Labour rebounded in the polls. But can Ardern live up to her promise? What does her new style of leadership look like in practice? And what can we learn from the world's reaction to this inspiring leader? Melanie Notkin wants to change our perceptions about childless women. The rise of childless women is one of the most overlooked and under-appreciated social issues of our time. Never previously have more women lived longer before having their first child or remained childless toward the end of their fertility. In the U.S., the level of childlessness of women age forty to forty-four has doubled, from 10 percent in 1976 to 20 percent in 2006. Society assumes that women either are mothers or choose not to be mothers, but waiting for love and marriage—or at least a committed union—before embarking on motherhood seems to be the least acceptable life choice for the modern woman. Nearly half of North American women of childbearing age are childless, a steep rise from 35 percent in 1976. Nevertheless, childless women are perceived as the exception, not the norm. In *Otherhood*, Melanie Notkin explores this modern phenomenon to understand the reasons for this shift, the social and emotional impact of childlessness, and how this "new normal" will impact social structures in the decades to come. Part anecdotal storytelling, part inspirational, part reportage, and part manifesto, *Otherhood* sets out to get to the heart of the issues, enliven the societal consciousness, and trigger conversation. Notkin offers a very personal take on a trend that affects so many modern women. This book addresses "containment" as it relates to interlocking discourses around the "War on Terror" as a global effort and its link to race and sexuality within the United States. The project emerged from the recognition that the events of 11 September 2001, prompted new efforts at containment with both domestic and international implications. This sweet author-illustrator debut celebrates imagination, the magic of friendship, and all the different ways we make a new place feel like home. For Ren, home is his grandmother's little house, and the lush forest that surrounds it. Home is a place of magic and wonder, filled with all the fantastical friends that Ren dreams up. Home is where his imagination can run wild. For Ava, home is a brick and cement city, where there's always something to do or see or hear. Home is a place bursting with life, where people bustle in and out like a big parade. Home is where Ava is never lonely because there's always someone to share in her adventures. When Ren moves to Ava's city, he feels lost without his wild. How will he ever feel at home in a place with no green and no magic, where everything is exactly what it seems? Of course, not everything in the city is what meets the eye, and as Ren discovers, nothing makes you feel at home quite like a friend. Inspired by the stories her father told her about moving from Puerto Rico to New York as a child, Zara González Hoang's author-illustrator debut is an imaginative exploration of the true meaning of "home." Several years ago, author B. A. Smit's health decided to go on a long walk. Its destination is unknown, but it is still walking. She noticed that she did not feel well after eating, so she started to investigate the complex relationship between the foods she ate and the way she felt. She started a series of experiments with her own diet and saw immediate improvement when she removed common culprits such as gluten, dairy, yeast, sugars and soy from her food choices. But as liberating as this information was, she was bored with the limited choices these restrictions presented. As a true food lover, she didn't find plain rice and carrots all that satisfying. She started a personal quest for food that was not only good for her but tasted good as well. This was the beginning of her long journey to *A New Kind of Normal*. This guide represents the culmination of her independent research. She covers the basics of nutrition, including the roles that carbohydrates, calories, fats and protein have on the body. She also provides a simple meal plan for those seeking to follow a balanced, healthy, gluten-free lifestyle. The recipes she includes are easy to make and completely adaptable to a variety of dietary restrictions. She proves that it doesn't necessarily take a medical degree to know a bit more about how the human body works. You too can benefit from her journey to healthier food choices. Explores the moral and philosophical underpinnings of Vonnegut's work. In the aftermath of World War II, civil war erupted in Greece between Western-orientated government forces and Communist rebels. The Truman administration subsequently became heavily involved in the internal conflict, including the establishment of an American military presence on Greek soil and regular arms shipments. This early containment policy, focusing on Greece as a crucial outpost in the Mediterranean arena, was symbolic of "America's Commitment to Free World Principles", and her fear that the Soviet's ultimate goal was world domination. This text explores the issues surrounding these events. This book reflects more than three decades of research on Cellular Automata (CA), and nearly a decade of work on the application of CA to model biological strings, which forms the foundation of 'A New Kind of Computational Biology' pioneered by the start-up, CARLBio. After a brief introduction on Cellular Automata (CA) theory and functional biology, it reports on the modeling of basic biological strings with CA, starting with the basic nucleotides leading to codon and anti-codon CA models. It derives a more involved CA model of DNA, RNA, the entire translation process for amino acid formation and the evolution of protein to its unique structure and function. In subsequent chapters the interaction of Proteins with other bio-molecules is also modeled. The only prior knowledge assumed necessary is an undergraduate knowledge of computer programming and biology. The book adopts a hands-on, "do-it-yourself" approach to enable readers to apply the method provided to derive the CA rules and comprehend how these are related to the physical 'rules' observed in biology. In a single framework, the authors have presented two branches of science - Computation and Biology. Instead of rigorous molecular dynamics modeling, which the authors describe as a Bottoms-Up model, or relying on the Top-Down new age Artificial Intelligence (AI) and Machine Language (ML) that depends on extensive availability of quality data, this book takes the best from both the Top-Down and Bottoms-up approaches and establishes how the behavior of complex molecules is represented in CA. The CA rules are derived from the basic knowledge of molecular interaction and construction observed in biological world but mapped to a few subset of known results to derive and predict results. This book is useful for students, researchers and industry practitioners who want to explore modeling and simulation of the physical world complex systems from a different perspective. It raises the inevitable the question - 'Are life and the universe nothing but a collection of continuous systems processing information'. You probably have a short list of people who impacted you during your childhood and teenage years. When those individuals intersected with your world, they became a new kind of leader for you. They were not new in the sense that they had never led anything before or they were radically different from other leaders. They were new because ... their influence gave you a new direction. their belief in you gave you a new sense of worth. they showed up at a new phase of your life, and their faith helped you solidify your faith in a new and authentic way. If someone showed up for you, then the question is, "How will you show up for someone else?" *A New Kind of Leader*, by Reggie Joiner, explores seven beliefs and practical applications that will cause you to reimagine how you influence the next generation. Because when you hold the door open for a kid, you hold the door open for the future. In *A Guide to the New Ruins of Great Britain*, Owen Hatherley skewered New Labour's architectural legacy in all its witless swagger. Now, in the year of the Diamond Jubilee and the London Olympics, he sets out to describe what the Coalition's altogether different approach to economic mismanagement and civic irresponsibility is doing to the places where the

British live. In a journey that begins and ends in the capital, Hatherley takes us from Plymouth and Brighton to Belfast and Aberdeen, by way of the eerie urbanism of the Welsh valleys and the much-mocked splendour of modernist Coventry. Everywhere outside the unreal Southeast, the building has stopped in towns and cities, which languish as they wait for the next bout of self-defeating austerity. Hatherley writes with unrivalled aggression about the disarray of modern Britain, and yet this remains a book about possibilities remembered, about unlikely successes in the midst of seemingly inexorable failure. For as well as trash, ancient and modern, Hatherley finds signs of the hopeful country Britain once was and hints of what it might become. After arriving in the remote western Australian town of Port Barren to live in a foster home, seventeen-year-old Jamie is unaccountably drawn to an abandoned boat, where he hears the voice of a dead young girl that leads him on a dangerous quest to uncover There's a growing desire among believers to reach beyond the walls of their churches to impact communities for God. But when the average church size hovers around 150 members and the problems of even midsized cities seem insurmountable, how can we hope to make a difference? A New Kind of Big tells the inspiring story of how Perimeter Church in suburban Atlanta started a partnership called Unite! with other area churches in order to increase its reach in a community that desperately needed God's light and aid. This partnership has grown to a network of nearly 150 churches that are bringing kingdom transformation to Atlanta. For instance, on just one weekend in 2007, 6,000 volunteers from over 60 churches in metro Atlanta gathered to work on 250 service projects inside the ten-mile radius around Perimeter Church. Thirty welcome baskets were delivered to refugees, a dozen homes were repaired, a thousand Bibles were given away, 750 "encourage a teacher" gift bags were distributed. And that's not all: volunteers orchestrated 20 block parties in low-income apartment communities and 65 neighborhood food drives that collected 25,000 pounds of food. Chip Sweney shows Christian leaders how they too can discover the power of this "new kind of big" to pool their resources, energy, and time to minister to their communities, no matter how long or short their membership rolls. This book is a collection of my memoirs centering around the day I was appointed to the city council. I detail how I was selected over 50 competitors to fill the seat, what I did to prepare and what it was like. I chronicle my journey from the mean streets of New York to the mayor's seat in Santa Clarita. This book is also a love story. It is the story of 47 years of marriage to my beautiful wife, Virginia. Our adventures extended far beyond those of most marriages and I share many of them here. Recently, my Virginia reminded me that I promised her the world when we got married and I delivered. I didn't deliver, Sweetheart. We delivered everything together. Ultimately, I decided to write this book to inspire others to follow their dreams. Take adventurous journeys. Live great lives. Success is not what society dictates. Success is what you define it as. There was a time when I had more material things than I could ever use. But it wasn't until I found service to others that I truly became successful in my life. It is my sincere hope that my story inspires you and gives you the courage to be the one to break the mold in your world.
