Since 1955, we have conducted an annual one-week ECG course at Innsbruck. This book represents a summary of our didactic experience. This English translation follows the enlarged sixth German edition. It contains many diagrams and new

examples of tracings, such as the orthogonal leads system of Frank, explanation of extreme axis deviation by the hemiblock concept, atrioventricular conduction disorders (His bundle electrogram), re-entry mechanisms, and the exercise ECG. The limits and dangers of ECG interpretations that, in our opinion, should be emphasized in an introductory presentation, are summarized in a final chapter. Our main aim was to make indigestible material palatable to the beginner; to provide him with a red thread through the labyrinth of ECG patterns by adopting a uniform

approach, namely vectorial interpretation, in order to understand especially difficult areas (e. g. the differential diagnosis of infarction) by means of simplified diagrams; and to prepare him for the study of systematic textbooks. We believe that many such books should be read in order to comprehend a subject that is generally considered difficult by physicians and at the same time to promote critical understanding when called upon to evaluate an ECG in practice. The following publications to which we ourselves owe valuable suggestions, even if they are not

explicitly mentioned in our text, are recommended: BELZ, G. G., STAUCH, M.: Notfall-EKG-Fibel, 2nd ed. Berlin, Heidelberg, New York: Springer 1977 BUCHNER, C. H., DRAGERT, W.: Schrittmachertherapie des Herzens. This book presents the global landslide risk preparedness implemented through the International Programme on Landslides (IPL). IPL was initiated by the International Consortium on Landslides (ICL) in 2002, and developed to a joint international programme by the IPL Global Promotion Committee (UNESCO, WMO, FAO, UNISDR,

UNU, ICSU and WFEO as well as ICL) through the 2006 Tokyo Action Plan. The materials consists of four parts: Outline of the International Programme on Landslides & IPL Global Promotion Committee; Achievements of major IPL projects in research and capacity building; World Centres of Excellence on Landslide Risk Reduction (WCoEs) and Landslide School Network; Key documents of IPL and ICL including Tokyo Action Plan, Application of ICL, IPL Projects, WCoEs and Landslide School Network This volume provides a comprehensive overview for

investigating biology at the level of individual cells. Chapters are organized into eight parts detailing a single-cell lab, single cell DNA-seq, RNA-seq, single cell proteomic and epigenetic, single cell multi-omics, single cell screening, and single cell live imaging. Written in the highly successful Methods in Molecular Biology series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and tips on troubleshooting and avoiding known pitfalls.

Authoritative and cutting-edge, *Single Cell Methods: Sequencing and Proteomics* aims to make each experiment easily reproducible in every lab. *Cyclic Polymers (Second Edition)* reviews the many recent advances in this rapidly expanding subject since the publication of the first edition in 1986. The preparation, characterisation, properties and applications of a wide range of organic and inorganic cyclic oligomers and polymers are described in detail, together with many examples of catenanes and rotaxanes. The importance of large cyclics in biological

chemistry and molecular biology is emphasised by a wide coverage of circular DNA, cyclic peptides and cyclic oligosaccharides and polysaccharides. Experimental techniques and theoretical aspects of cyclic polymers are included, as well as examples of their uses such as ring opening polymerisation reactions to give commercially important materials. This book covers a wide range of topics which should be of interest to many scientific research workers (for example, in polymer science, chemistry and molecular biology), as well as providing a reference text for

undergraduate and graduate students. This book discusses the problems of delivering goods from East and South-East Asia to Europe, presenting the regional transport problems experienced in Italy, Slovakia, Russia, Georgia, Kazakhstan, Uzbekistan and Poland. The book is divided into two parts. The first part is devoted to the analysis of various issues in global logistics and regional transport, which operate in transport corridors. The second part of the book focuses on solutions to some of the technical and informatics problems related to the organization of transportation along the

East-West routes. Intended primarily for professionals involved in various aspects of cargo delivery along the East-West routes, the book is also useful for manufacturers, technical staff at logistics companies, managers, students of transport-related subjects, as well as for a wide range of readers interested in the current state of transport in different countries. This book presents the latest research in quantifying complex mixtures in the environment and analyzing their potential impact on human health. Many of the manuscripts reported in these proceedings represent the most up-to-date

measurements of population exposures in Central and Eastern Europe. These studies are of value to health and environmental professionals around the world as they develop strategies for assessing exposures, remediating contaminated environments, and improving public health. knowledge alive and relevant. Radical Hermeneutics forges a closer collaboration between hermeneutics and deconstruction than has previously been attempted. For John D. Caputo, hermeneutics means radical thinking without transcendental justification: attending to the ruptures and irregularities in existence before the metaphysics of presence has a chance to smooth over them. These volumes have long been essential reading for many practitioners of the healing arts, especially those who employ manual techniques or energy-balancing

procedures. Polarity Therapy can be used in psychotherapy, chiropractic therapy, osteopathy, many types of massage, physical therapy, dance, yoga, and other forms of bodywork. Volume I includes the following major works by Dr. Stone and is reproduced from the original first editions: Energy: The Vital Polarity in the Healing Art, The Wireless Anatomy of Man, and Polarity Therapy. The genus *Togninia* (Diaporthales, Togniniaceae) is here monographed along with its *Phaeoacremonium* (Pm.) anamorphs. Ten species of *Togninia* and 22 species of

Phaeoacremonium are treated. Several new species of *Togninia* (T.) are described, namely *T. argentinensis* (anamorph Pm. *argentinense*), *T. austroafricana* (anamorph Pm. *austroafricanum*), *T. krajdenii*, *T. parasitica*, *T. rubrigena* and *T. viticola*. New species of *Phaeoacremonium* include Pm. *novae-zealandiae* (teleomorph *T. novae-zealandiae*), Pm. *iranianum*, Pm. *sphinctrophorum* and Pm. *theobromatis*. Species can be identified based on their cultural and morphological characters, supported by DNA data derived from partial sequences of the actin and β -

tubulin genes. Phylogenies of the SSU and LSU rRNA genes were used to determine whether *Togninia* has more affinity with the Calosphaeriales or the Diaporthales. The results confirmed that *Togninia* had a higher affinity to the Diaporthales than the Calosphaeriales. Examination of type specimens revealed that *T. cornicola*, *T. vasculosa*, *T. rhododendri*, *T. minima* var. *timidula* and *T. villosa*, were not members of *Togninia*. The new combinations *Calosphaeria cornicola*, *Calosphaeria rhododendri*, *Calosphaeria transversa*, *Calosphaeria*

timidula, *Calosphaeria vasculosa* and *Jattaea villosa* are proposed. Species of *Phaeoacremonium* are known vascular plant pathogens causing wilting and dieback of woody plants. The most prominent diseases in which they are involved are Petri disease and esca, which occur on grapevines and are caused by a complex of fungi, often including multiple species of *Phaeoacremonium*. Various *Phaeoacremonium* species are opportunistic fungi on humans and cause phaeohyphomycosis. The correct and rapid identification of *Phaeoacremonium*

species is important to facilitate the understanding of their involvement in plant as well as human disease. A rapid identification method was developed for the 22 species of *Phaeoacremonium*. It involved the use of 23 species-specific primers, including 20 primers targeting the β -tubulin gene and three targeting the actin gene. These primers can be used in 14 multiplex reactions. Additionally, a multiple-entry electronic key based on morphological, cultural and β -tubulin sequence data was developed to facilitate phenotypic and sequence-based species

identification of the different *Phaeoacremonium* species. Separate dichotomous keys are provided for the identification of the *Togninia* and *Phaeoacremonium* species. Keys for the identification of *Phaeoacremonium*-like fungi and the genera related to *Togninia* are also provided. The mating strategy of several *Togninia* species was investigated with ascospores obtained from fertile perithecia produced *in vitro*. *Togninia argentinensis* and *T. novae-zealandiae* have homothallic mating systems, whereas *T. austroafricana*, *T. krajdenii*, *T. minima*, *T. parasitica*, *T.*

rubrigena and *T. viticola* were heterothallic. The book synergizes research on number across two disciplines—mathematics education and psychology. The underlying problem the book addresses is how the brain constructs number. The opening chapter frames the problem in terms of children’s activity, including mental and physical actions. Subsequent chapters are organized into sections that address specific domains of number: natural numbers, fractions, and integers. Chapters within each section address ways that children build upon biological primitives (e.g.,

subitizing) and prior constructs (e.g., counting sequences) to construct number. The book relies on co-authored chapters and commentaries at the end of each section to create dialogue between junior faculty and senior researchers, as well as between psychologists and mathematics educators. The final chapter brings this work together around the framework of children’s activity and additional themes that arise in the collective work. The book is aimed to appeal to mathematics educators, mathematics teacher educators, mathematics education

researchers, educational psychologists, cognitive psychologists, and developmental psychologists. On the 20th September 1992, a group of bush walkers discovered a decaying corpse whilst orienteering in the Belanglo State Forest. The Discovery triggered the biggest manhunt in Australian History. Written by an actual lawyer who dealt with Ivan Milat in his early years, "Innocent Until Proven" is based on the true story behind serial killer Ivan Milat and his lawyers. It provides a real insight into the legal profession through the eyes of two young lawyers.

"Innocent Until Proven" will make you laugh and make you cry. The climax is so gripping it will have you at the edge of your seat! PREFACE. THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly as possible. The writing of this book has afforded him pleasure in his leisure moments, and that pleasure would be much

increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. This section is interleaved with blank sheets for the readers notes. The Author need hardly say that any suggestions addressed to the case of the publishers, will meet with consideration in a future edition. We do not pretend to write or enlarge upon a new subject. Much has been said and written-and well said and written too on the art of fishing but loch-fishing has been rather looked upon as a second-rate performance, and to dispel this

idea is one of the objects for which this present treatise has been written. Far be it from us to say anything against fishing, lawfully practised in any form but many pent up in our large towns will bear us out when we say that, on the whole, a days loch-fishing is the most convenient. One great matter is, that the loch-fisher is depend-ent on nothing but enough wind to curl the water, -and on a large loch it is very seldom that a dead calm prevails all day, -and can make his arrangements for a day, weeks beforehand whereas the stream-fisher is dependent for a good take on the state of the water

and however pleasant and easy it may be for one living near the banks of a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead. Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, - such as many of our northern streams are, -the water is either too large or too small, unless, as previously remarked, you live near at hand, and

can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and the other from the bow of the same boat. Of all the absurd beliefs as to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may

come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as much to do with catching trout in a loch as the angler. Well, we dont deny that. In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing... Emphasizes the importance of surface and colloid chemistry in the manufacture of high-performance ceramics. Examines processing-property relationships, powderproduction andcharacterization, the dispersion

properties of powders in liquids, the rheology of concentrated suspensions, and the surface and colloid chemistry aspects of the most widely used forming methods. An aging California vintner is determined to protect her empire from a hostile family takeover and the dark secrets that could destroy everything she loves. At age seventy-four, Assaria "Sari" LeBaron is still a force to be reckoned with. For decades, she has run the Baronet Vineyards, one of California's largest and most successful wine producers, maintaining sole control even after a suspicious accident

left her permanently crippled. And now, in her golden years, the formidable Sari refuses to relinquish power to her own children, a decision that has only served to increase tensions among her already emotionally damaged family members. But Sari's ambitious son, Eric, is no longer willing to play a subservient role, and has begun working behind the scenes to take over the business, forming alliances within and outside the family in his effort to dethrone the unyielding matriarch. The most difficult fight of Sari LeBaron's long and eventful life has begun; a heartbreaking

struggle that will pit loved one against loved one and expose long-hidden secrets that could destroy both Sari's business and her family. The LeBaron Secret is another riveting excursion into a world of privilege that Stephen Birmingham knows intimately. It is a breathtaking tale of secrets and lies, shady double-dealings, family skeletons, and the inner turmoil of the fabulously wealthy as only the bestselling author of "Our Crowd" and The Auerbach Will could tell it. The book is devoted to the description of the fundamentals in the area of magnetic resonance. The book covers two

domains:
radiospectroscopy
and quantum
radioelectronics.
Radiospectroscopy
comprises nuclear
magnetic resonance
, electron
paramagnetic
resonance, nuclear
quadrupolar
resonance, and
some other
phenomena. The
radiospectroscopic
methods are widely
used for obtaining
the information on
internal (nano,
micro and macro)
structure of objects.
Quantum
radioelectronics,
which was
developed on the
basis of
radiospectroscopic
methods, deals with
processes in
quantum amplifiers,
generators and
magnetometers. We
do not know
analogues of the

book presented.
The book implies a
few levels of the
general
consideration of
phenomena, that
can be useful for
different groups of
readers (students,
PhD students,
scientists from
other scientific
branches: physics,
chemistry, physical
chemistry,
biochemistry,
biology and
medicine). Much of
contemporary
philosophy, political
theory, and social
thought has been
shaped directly or
indirectly by Georg
Wilhelm Friedrich
Hegel, though there
is considerable
disagreement about
how his work
should be
understood. He has
been described
both as a
metaphysician and

characterized as an
ironic narrator who
anticipated the
character of
philosophy after
metaphysics. His
position is equally
ambiguous with
regard to his
political thought.
He has been
construed both as
an enemy of the
liberal state and as
a friend of freedom.
This volume's
revisionist
reassessment,
building on the
scholarship of Klaus
Hartmann, explores
these ambiguities in
favor of a non-
metaphysical
reading of Hegel's
arguments. It also
shows how the
foundations of his
political thought
support a liberal
democratic state.
This reappraisal of
Hegel's arguments
resituates him as a

philosopher who anticipates the difficulties of post-modernity and offers a basis for reassessing ontology, aesthetics, and revolution. Philosophers and those doing work in political theory will find this volume of great interest. The underlying astrophysical mechanisms of the objects known as asymptotic giant branch stars - the structures that occur during the dramatic period prior to a star's death - is the main theme of this text. Over the past three decades, asymptotic giant branch stars have become a topic of their own, and the contributions to this volume all focus on

these entities themselves, rather than their connections to other fields of astronomy. Among the many topics covered are new methods of high-quality infrared observation and the more detailed and realistic simulations made possible by increasingly fast computers. This collection should be useful to graduate students who work in the field, teachers who want to address the subject in their courses, and to astronomers from various backgrounds who are interested in the astrophysics of AGB stars. This textbook presents a modern account of turbulence, one of the greatest

challenges in physics. The state-of-the-art is put into historical perspective five centuries after the first studies of Leonardo and half a century after the first attempt by A.N. Kolmogorov to predict the properties of flow at very high Reynolds numbers. Such "fully developed turbulence" is ubiquitous in both cosmic and natural environments, in engineering applications and in everyday life. First, a qualitative introduction is given to bring out the need for a probabilistic description of what is in essence a deterministic system.

Kolmogorov's 1941 theory is presented in a novel fashion with emphasis on symmetries (including scaling transformations) which are broken by the mechanisms producing the turbulence and restored by the chaotic character of the cascade to small scales. Considerable material is devoted to intermittency, the clumpiness of small-scale activity, which has led to the development of fractal and multifractal models. Such models, pioneered by B. Mandelbrot, have applications in numerous fields besides turbulence (diffusion limited aggregation, solid-earth geophysics, attractors of

dynamical systems, etc). The final chapter contains an introduction to analytic theories of the sort pioneered by R. Kraichnan, to the modern theory of eddy transport and renormalization and to recent developments in the statistical theory of two-dimensional turbulence. The book concludes with a guide to further reading. The intended readership for the book ranges from first-year graduate students in mathematics, physics, astrophysics, geosciences and engineering, to professional scientists and engineers. This book presents a specific technical solution, called

intermodal transport, which became the basic technological solution that made it possible to provide global interregional transport. Every day, new technical, technological, and organizational solutions appear that significantly affect the further development of this industry. However, there are certain local differences between regions. In addition, an essential factor is the exchange of experience between scientists from different countries. Accordingly, the purpose of this monothematic book is to acquaint readers with the achievements of scientists dealing with this topic and

living in different regions. Scientists and specialists from Poland, Germany, Great Britain, USA, Romania, Bulgaria, Russia, Italy, Kazakhstan, and Lithuania participated in the writing of individual chapters of this book. This book is intended for professionals, teachers, students, and others who are interested in new approaches to solving transport problems. The Trinidadian guppy represents a uniquely tractable vertebrate system, which has raised key questions in evolutionary ecology and supplied many of the answers. This work discusses this study and incorporates

significant new findings and insights. This open access book discusses socio-environmental interactions in the middle to late Holocene, covering specific areas along the ancient Silk Road regions. Over twenty chapters provide insight into this topic from various disciplinary angles and perspectives, ranging from archaeology, paleoclimatology, antiquity, historical geography, agriculture, carving art and literacy. The Silk Road is a modern concept for an ancient network of trade routes that for centuries facilitated and intensified processes of cultural interaction

and goods exchange between West China, Central Asia, the Middle East, and the Mediterranean. Coherent patterns and synchronous events in history suggest possible links between social upheaval, resource utilization and climate or environment forces along the Silk Road and in a broader area. Post-graduates in studying will benefit from this work, as well as it will stimulate young researchers to further explore the role played by the environment in long-term socio-cultural changes.
