It offers a structured development of mental calculation strategies, using clear progression and continuity of topics, and increases the pace of progression. The functional notion of [topic] or [topicality] has suffered, traditionally, from two distinct drawbacks. First, it has remained largely ill defined or intuitively defined. And second, quite often its definition boiled down to structure-dependent circularity. This volume represents a major departure from past practices, without rejecting both their intuitive appeal and the many good results yielded by them. First, [topic] and [topicality] are re-analyzed as a scalar property, rather than as an either/or discrete prime. Second, the graded property of [topicality] is firmly connected with sensible cognitive notions culled from gestalt psychology, such as [predictability] or [continuity]. Third, we develop and utilize precise measures and quantified methods by which the property of [topicality] of clausal arguments can be studied in connected discourse, and thus be properly hinged in its rightful context, that of topic identification, maintenance and recoverability in discourse. Fourth, we show that many grammatical phenomena which used to be studied by linguists in isolation, all partake in one functional domain of grammar, that of topic identification. Finally, we demonstrate the validity of this new approach to the study of [topic] and [topicality] by applying the same text-based quantifying method to a number of typologically-diverse languages, in studying actual texts. Languages studied here are: Written and spoken English, spoken Spanish, Biblical Hebrew, Amharic, Hausa, Japanese, Chamorro and Ute. • Chapter-wise&Topic-wisepresentation • Chapter Objectives-A sneak peek into the chapter • Mind Map:A single page snapshot of the entire chapter • Quick Review: Concept-based study material • Tips & Tricks:Useful guidelines for attempting each question perfectly • Some Commonly Made Errors:Most common and unidentified errors made by students discussed • Expert Advice- Oswaal Expert Advice on how to score more! • Oswaal QR Codes- For Quick Revision on your Mobile Phones & Tablets This volume contains student and instructor material for the delivery of a two-semester calculus sequence at the undergraduate level. It can be used in conjunction with any textbook. It was written with the view that students who are actively involved inside and outside the classroom are more likely to succeed, develop deeper conceptual understanding, and retain knowledge than students who are passive recipients of information. Calculus: An Active Approach with Projects contains two main student sections. The first contains activities usually done in class, individually or in groups. Many of the activities allow students to participate in the development of central calculus ideas. The second section contains longer projects where students work in groups outside the classroom. These projects may involve material already presented, motivate concepts, or introduce supplementary topics. Instructor materials contained in the volume include comments and notes on each project and activity, guidelines on their implementation, and a sample curriculum which incorporates a collection of activities and projects. In the Iranic-Semitic-Turkic contact area, where many languages are described as verb-final, 'Targets' (Goals, Recipients, etc.) tend to appear in the immediate postverbal position, a pattern violating the alleged 'basic word order'. Investigating empirical material, the present volume examines the idea of its contact-induced origin by combining various languages from inside and outside this contact area: the Greek variety Romeyka, Indic Domari, Iranic Balochi Kurdish, Middle Persian, Parthian, Bactrian and Sogdian, Nilotic Maa, Semitic Arabic and Aramaic, Sibirian and Iran-Turkic. The contributors investigate word order variation of transitive, ditransitive, and copula structures as well as intransitives with Targets. Their analyses highlight the relevance of grammatical, discourse-pragmatic, and cognitive principles. The volume highlights the importance of

Target structures for linguistic theory by offering new perspectives and will be of interest to typologists and linguists interested in word order variation and information structure. The debate over form versus function rages intensely in discussions of Hebrew syntax. This volume sets out the parameters of the debate and the historical reasons for how the questions of narrative syntax are being approached by today's scholars. This publication has also been published in hardback, please click here for details. In contrastive linguistics of English and German, there is a tradition of accounting for contrasts with respect to grammar and, to a lesser extent, for lexis and phonetics. Moving on to discourse and text, there is a sizeable body of literature on cohesive patterns in English and German respectively - but very little in terms of a comparison. The latter, though, is of particular interest for language learners, translators and, of course, linguists and researchers in language technology. This book attempts to close this gap, based on a number of years of corpus-based study into variation and cohesion in the two languages. While there is an overall focus on language contrasts, it also investigates variation between different registers language-internally, and between written and spoken mode in particular. For each of the five major types of cohesion (co-reference, substitution, ellipsis, conjunctive relations and lexical cohesion), overviews are given of contrasts in the system and of contrastive frequencies in texts. Results and methods presented in this book are thus relevant for language teaching, translation, language technology and corpus-based work on English and German generally. A number of urgent problems are rising to human life: The attack of terrorists is hard to predict, due to the hidden leaderships. New diseases are hard to extinguish, due to their new causes. Products may be shortly abandoned, due to the appearance of new desires. A common feature of recent socially high-impact problems, such as detecting the causal virus of SARS, is that they are open to multiple scientific domains. In order to respond to this social requirement, this book collects selected papers by authors for CODATA 2006, which are relevant to the discoveries of knowledge, risk, and opportunities by combining data from multiple disciplines. By presenting papers in this book, we aim at urging the development of data-based methods and methodologies for interdisciplinary and creative communications for solving emerging social problems. The reader shall view the direction to combine three methodological frameworks: data mining, data sharing, and communication in the contexts of sciences and businesses. This practical and accessible book explores ways of developing continuity and coherence in children's learning from three to seven years old. It is based around three case studies in which tutors on Initial Teacher Training courses worked with early years practitioners in three different pre-school settings, each linked to a primary school. The book describes how they successfully managed to plan and teach integrated themes across the age-range in the context of the requirements of the Foundation Stage and the National Curriculum. Each case study has a different focus: * science, design and technology * 'the arts' - including an ICT strand * 'the humanities' - including a physical education strand English and mathematics dimensions run through each theme. The book is alive with discussion of children's art, language, drama and music, captured as field notes, writing, drawing, and as video tape. Each chapter concludes with suggestions of ways in which readers can develop the ideas in their own contexts. This book will be invaluable reading for students on Early Years courses, Early Years practitioners, and tutors and mentors in early childhood education. Accessing Noun-Phrase Antecedents offers a radical shift in the analysis of discourse anaphora, from a purely pragmatic account to a cognitive account, in terms of processing procedures. Mira Ariel defines referring expressions as markers signalling the degree of Accessibility in memory of the antecedent. The notion of Accessibility is explicitly defined, the crucial factors being the Saliency of the antecedent, and the Unity between the antecedent and the anaphor. This analysis yields an astonishing array of new results. The precise distribution of referring expressions in actual discourse is directly predicted. Several universals of anaphoric relations are stated. Thus, although not all languages necessarily have the same markers, and nor do they assign them precisely the same function, Ariel shows that they all obey the same Accessibility marking hierarchy. This book will be compulsory reading for anyone with an interest in the semantics and pragmatics of referring expressions, in the interaction of semantics and pragmatics, and more generally in the interaction between peripheral and central cognitive systems. Why does Matthew use this command, μετανοείτε, at the beginning of his ministry, and how does it relate to the rest of the Gospel? What do μετανοέω and μετάνοια mean? Scholars have stated that μετανοέω in 4:17 has critical value for understanding Matthew because the verse functions as a summary statement (or key phrase) of Jesus's public ministry and teaching. This book argues the thematic significance of μετάνοια (turning/repentance) in the Gospel of Matthew. The lexical idea of μετανοέω and μετάνοια involves a turning of mind (or heart, will, thinking) and behavior, and so in turn of one's whole being and life. This opening commandment of turning (μετανοέω), especially the concept, the essence, and the contents is fully revealed throughout the body of Matthew in various ways. Discipleship, the language of righteousness, doing the will of God, changing one's heart and mind, the Great Commission, and Matthean soteriological theme convey the essence of μετάνοια and the contents of the fruit worthy of μετάνοια(3:2, 8; 4:17). The five major teaching blocks (5-7; 10; 13; 18; 23-25) teach the theme and the content of μετάνοια. Through corpus-based analysis of both interactive conversations and monologic narratives, Amy M. Lindstrom reveals how the discourse/pragmatic factors of accessibility and chronological ordering, the prosodic effect of linking, and the mechanical effect of priming intersect to provide a rigorous account of subject (un)expression in spoken American English. Higher degrees of linking, cohesion, and connection lead to more unexpressed subjects. Lindstrom also analyzes frequent constructions with unexpressed subjects vis-à-vis paths of grammaticalization. The author presents a measurement of discourse connectedness that shows how the intersection of prosody and pragmatics illustrates the powerful effect of spontaneous discourse in shaping grammar. This study adds to our understanding of language and cognition by contributing to our knowledge of the conceptualization, categorization, and representation of experience and memory. Focusing on uses of the Delphi method in social planning, this book discusses practical issues which need to be considered for the technique to be applied successfully; illustrates use of the technique through case studies; and assesses the potential of the method for social policy and planning. This book is the first comprehensive description of the Manambu language of Papua New Guinea and is based entirely on the author's immersion fieldwork. Manambu belongs to the Ndu language family, and is spoken by about 2,500 people in five villages: Avatip, Yawabak,

Malu, Apa:n, and Yambon (Yuanab) in East Sepik Province, Ambunti district. Manambu can be considered an endangered language. The Manambu language has many unusual properties. Every noun is considered masculine or feminine. Feminine gender - which is unmarked - is associated with small size and round shape, and masculine gender with elongated shape, large size, and importance. The Manambu culture is centered on ownership of personal names, and is similar to that of the Iatmul, described by Gregory Bateson. After an introductory account of the language and its speakers, Professor Aikhenvald devotes chapters to phonology, grammatical relations, word classes, gender, semantics, number, case, possession, derivation and compounding, pronouns, morphohology, verbs, mood and modality, negation, clause structure, pragmatics, discourse, semantics, the lexicon, current directions of change, and genetic relationship to other languages. The description is presented in a clear style in a framework that will be comprehensible to all linguists and linguistically oriented anthropologists. For this book, the editors invited and called for contributions from indispensable research areas relevant to "chance discovery," which has been defined as the discovery of events significant for making a decision, and studied since 2000. From respective research areas as artificial intelligence, mathematics, cognitive science, medical science, risk management, methodologies for design and communication, the invited and selected authors in this book present their particular approaches to chance discovery. The chapters here show contributions to identifying rare or hidden events and explaining their significance, predicting future trends, communications for scenario development in marketing and design, identification effects and side-effects of medicines, etc. The methods presented in this book are based on the interaction of human, machine, and human's living environment, rather than based purely automated predictions of the future. This is a promising direction of computer-supported decision of human in a radically changing environment.
