The automotive industry underwent great change in the 1960s and the early 1970s. The continuing trend toward market consolidation, the proliferation of sizes and nameplates, and the “need for speed” characterized this period, loosely labeled as the muscle car era. This is an exhaustive reference work to American made cars of model years 1960–1972. Organized by year (and summarizing the market annually), it provides a yearly update on each make’s status and production figures, then details all models offered for that year. Model listings include available body styles, base prices, engine and transmission choices, power ratings, standard equipment, major options and their prices, curb weight and dimensions (interior and exterior), paint color choices, changes from the previous year’s model, and sales figures. Also given are assembly plant locations and historical overviews of each model nameplate. The book is profusely illustrated with 1,018 photographs. Since the dream of flight was finally realized by two Ohioans, Wilbur and Orville Wright, it is little wonder that Greater Clevelanders were quick to embrace it. From the August day in 1910 when Glenn Curtiss flew from Euclid Beach Park to Cedar Point, aviation has had a strong following in Cleveland. World War I saw the dawn of aircraft production in the city, and the 1920s brought the world-renowned Cleveland National Air Races. Cleveland industry supported aviation in many different ways, and multiple airports, many now long gone, promoted business aviation and flight training for decades. During World War II, Cleveland was a center of war production, and much of this was aviation related. Subsequently, renovations of the Cleveland Municipal Airport created Cleveland Hopkins International Airport. A scene of thriving airline operations to this day, Cleveland's business community was quick to appreciate the advantages of corporate aviation, which remains a daily feature of Cleveland's aviation life. Ignited by a single match on April 30, 1977, the Five Mile Tower Fire raged out of control for 17 hours. It would be one of the largest wildland fires in Wisconsin history, ultimately destroying more than 13,000 acres of land and 63 buildings. As a column of black pine smoke reached high in the sky, citizens from Minong, Chicog, Webster, Gordon, Wascott, Hayward, Spooner, Solon Springs, and other communities began showing up to help. The grassy field designated as fire headquarters quickly became a hub of activity, jammed with trucks, school buses, dozers on trailers, dump trucks, tanker trucks, fuel trucks, and hundreds of people waiting to sign in. More than 900 came in the first four hours, clogging the road with traffic in both directions. Headquarters personnel worked valiantly to coordinate citizens and DNR workers in a buildup of people and equipment unprecedented in the history of Wisconsin firefighting. Based on his own experiences during the long battle, plus dozens of interviews and other eyewitness accounts, Bill Matthias presents an in-depth look at the Five Mile Tower Fire, the brave citizens who helped fight it, and the important changes made to firefighting laws and procedures in its aftermath. In a political climate that is ever more focused on austerity and efficiency, it is crucial that those who advocate for, support, and implement social policy know how to analyze it and understand its effects, successes, and failures. This volume offers a clear introduction to social policy analysis, starting from the question of why social policy analysis is worthwhile, then moving on to how it can be used to consider approaches to a wide range of social welfare issues. Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties taken from automaker internal service bulletins and memos than ever. The Unwilling and the Reluctant: Theoretical Perspectives on Disobedience in the Military and The Apathetic and the Defiant: Case Studies of Canadian Mutiny and Disobedience, 1812-1919 are the first two volumes in a series devoted to disobedience issues in the Canadian military. Now with The

Insubordinate and the Noncompliant, the trilogy is complete. Military leadership has both formal and informal dimensions. The formal leadership of any organization must ensure that it minimizes the divergence between institutional aims and the actions of informal leaders. When this separation occurs, the result is sometimes mutiny. These incidents of insubordination and noncompliance represent a form of dialogue between military personnel and their leadership. The Insubordinate and the Noncompliant offers a perspective on the Canadian experience with military mutiny in the twentieth century in an effort to provide relevant lessons for today. ALASKA SHIPWRECKS 1750-2015 is an encyclopedic accounting of all shipwrecks and losses of life in the Alaska Marine environment. Compiled and written by Captain Warren Good with research assistance and extensive consultation provided by maritime historian Michael Burwell this book is filled with a wealth of information for those interested in Alaska maritime history and the multitude of associated tragedies. Included are details of all known wrecks including vessel information, crew member and passenger names, locations, first hand descriptions of events and sources of all information. In addition, comprehensive comments by Captain Warren Good further elaborate on the location and disposition of many of the disasters. The United States government invests billions each year on equipping armed forces with the most advanced military equipment. The root of the American defense acquisition system is driven by a combination of national interests and domestic political requirements. While fundamentally the defense acquisition system has produced results for the United States military, improvements are needed in order to continue to move forward in advancing military tactics and technology. Exploring both the systemic and political levels of the system, Sorenson argues that the United States will fall behind if the current defense acquisition system is not reformed. This book brings together elements of this complicated system, such as national security requirements, and the changes that are needed in both the structural and political pillars. A combination of political interests and the needs of the military, serviced by an ever-shrinking defense industry, make a genuine acquisition reform even more difficult, resulting in reform that is more symbolic than genuine.
