The sixteenth volume in the Aubrey/Maturin series, and Patrick O'Brian's first bestseller in the United States.

At the outset of this adventure filled with disaster and delight, Jack Aubrey and Stephen Maturin pursue an American privateer through the Great South Sea. The strange color of the ocean reminds Stephen of Homer's famous description, and portends an underwater volcanic eruption that will create a new island overnight and leave an indelible impression on the reader's imagination. Their ship, the Surprise, is now also a privateer, the better to escape diplomatic complications from Stephen's mission, which is to ignite the revolutionary tinder of South America. Jack will survive a desperate open boat journey and come face to face with his illegitimate black son; Stephen, caught up in the aftermath of his failed coup, will flee for his life into the high, frozen wastes of the Andes; and Patrick O'Brian's brilliantly detailed narrative will reunite them at last in a breathtaking chase through stormy seas and icebergs south of Cape Horn, where the hunters suddenly become the hunted.

It explains in clear language those parts of the Regs that most need simplifying, outlining the correct procedures to follow and those to avoid. Emphasis has been placed on areas where confusion and misinterpretation is common, such as earthing and bonding, circuit design and protection, and in particular the increased use of RCDs. It is an affordable reference for all electrical contractors and other workers involved in electrical installations. It will enable safe and efficient compliance and help answer queries quickly to ensure work complies with the latest version of the Wiring Regulations. This new edition will be an essential reference for all contractors, technicians and other professionals, as well as newcomers to the industry, who need to ensure their work complies with the latest version of the Wiring Regulations. Used alongside the regulations themselves, this book is the key to safe and efficient electrical installation. The book is also a concise and popular text for the City & Guilds 2381 syllabus. The new edition is updated throughout to match the 2004 version of BS 7671:2001 (incorporating Amendments 1:2002 & 2:2004), and also features extended coverage of Special Locations (such as bathrooms, construction sites and computer / data type installations). There are common misconceptions in the application of the Wiring Regulations in these areas with regard to bonding, voltages, disconnection times and sizes of earthing conductors. Brian Scaddan clarifies the requirements, and outlines the correct procedures to follow (and those to avoid!). Problems are provided, for use as 'self-check' exercises or college assignments. Brian Scaddan is the Chief Examiner for the City & Guilds 2391 vocational award. From last year or so, I received several suggestions that its size be pruned a bit, as many learners who learn C language in their Engineering or Science curriculum have some familiarity with it. I am happy to fulfill this request. I hope the readers would appreciate the lean look of the current edition. In one of the previous edition I had realigned the chapters in such a manner that if a C programming course is taught using Let Us C, it can be finished in 22 lectures of one hour each, with one chapter's contents devoted to one lecture. I am happy that many readers liked this idea and reported that this has made their learning path trouble-free. A more rational reorganization of end-of-chapter exercises in the book has also been well-received. Riding on that feedback I had introduced one more feature in the fifteenth edition - KanNotes. These are hand-crafted notes on C programming. From the reader's emails I gather that they have turned out to be very useful to help revise their concepts on the day before the examination, viva-

voce or interview. Many readers also told me that they have immensely benefitted from the inclusion of the chapter on Interview FAQs. I have improved this chapter further. The rationale behind this chapter is simple—ultimately all the readers of Let Us C sooner or later end up in an interview room where they are required to take questions on C programming. I now have a proof that this chapter has helped to make that journey smooth and fruitful. 'Sounding like one instrument, a wild whirling bagpipe, the Stones chugged to a halt. But the crowd didn't stop, we could see Hells Angels spinning like madmen, swinging at people. By stage right a tall white boy with a black cloud of electric hair was dancing, shaking, infuriating the Angels by having too good a time.' *The True Adventures of the Rolling Stones* is not just the greatest book about the greatest rock 'n' roll band, it is one of the most important books about the 1960s capturing its zeitgeist - that uneasy mix of excess,

violence and idealism - in a way no other book does. Stanley Booth was with the Rolling Stones on their 1969 U.S. tour, which culminated in the notorious free concert at Altamont. But this book is much more than a brilliant piece of journalism. It gives a history of the Rolling Stones from their early rhythm 'n' blues days in west London clubs to the end of the 1960s; and it interweaves with mastery the two tragic stories of the decline and death of Brian Jones and the terrifying Altamont concert itself, where the Hells Angels, supposedly providing security, ran amok and murdered a member of the audience. Although it took nearly fifteen years to write, the book that emerged has been rightly acclaimed as 'the one authentic masterpiece of rock 'n' writing'.
