The eleventh edition of Auditing provides a simplified but thorough approach to students understanding of auditing theory and practice. It clearly explains the key features of auditing in short, easily accessible sections to encourage effective learning. The authors have sought to provide a comprehensive textbook with up-to-date research. Auditing has been completely updated to reflect recent changes in international standards, regulatory processes and corporate governance as well as developments in the field of auditing. The new edition is ideal for anyone studying modules in auditing at undergraduate or postgraduate level, or those preparing for professional examinations set by accounting bodies such as ACCA. Messier employs the new audit approach currently being used by auditing professionals. This new approach is a direct result of the demands of Sarbanes-Oxley, which has changed the way auditors do their jobs. The new auditing approach emphasizes understanding the entity (i.e., the organization or business being audited) and its environment (i.e. industry), and then assessing the business risks faced by the entity and how management controls those risks. This new audit process focuses on business processes instead of accounting cycles. This unique and innovative approach has been developed in response to changing market dynamics. The systematic approach, referred to in the subtitle of the text, reflects the early introduction of three basic concepts that underlie the audit process: materiality, audit risk, and evidence; this allows Messier to build upon this model in subsequent chapters. These are central to everything an auditor does and a unique feature of Messier. As such, this approach helps students develop auditor judgment, a vital skill in today's auditing environment. As auditors, we are trained to investigate beyond appearances to determine the underlying facts—in other words, to look beneath the surface. From the Enron and WorldCom
